Installation

1. Install dependencies for the lambda functions:

```
cd src/lambda

npm install
```

2. Package the CloudFormation template

```
cd cfn

aws cloudformation package \
  --template-file main.template \
  --output-template-file packaged.template \
  --s3-bucket <YOUR_BUCKET>
```

You must replace `<YOUR_BUCKET>` with the name of an S3 bucket in your account that will be used to store the packaged lambda functions.

3. Deploy the CloudFormation template

```
aws cloudformation deploy \
  --template-file packaged.template \
  --stack-name <STACK_NAME> \
  --capabilities CAPABILITY_IAM CAPABILITY_AUTO_EXPAND
```

The following values must be replaced when running the above command:

You must replace `<STACK_NAME>` with a unique name for the CloudFormation stack

4. Add users to Cognito
 - Navigate to the Cognito console and locate the User Pool that was deployed by CloudFormation in step 3.
 - Go to "Users and Groups"
 - Add users as required
